## ORGANIC CHEMISTRY II (2302)

12:20 – 1:10 pm, November 16, 2015

### Exam 3

If you want to pick this exam up Wednesday in class (in public), please check the box on the right:

If you do not check the box, I will not bring your exam to class on Wednesday, and you will need to pick up your exam in private from Chemistry department staff in 115 Smith beginning Thursday, November 19<sup>th</sup>. Exams that are not picked up within two weeks will be disposed of.

---

A periodic table is attached to the back of this exam as an aid. Otherwise, you are not permitted to use any other materials (including notes, books, or electronic devices of any kind).

Right now, write your name and student ID number at the top of this page. When the exam begins, please write your name at the top of the next page.

You may use pen or pencil. However, re-grades will be considered only for exams completed in pen.

Please write your answers in the boxes/spaces provided. If your answer is not in the appropriate space (say, for example, it's on the back of the page), draw us an arrow and/or note telling us where to look.

NAME \_\_\_\_\_

Scoring: 1. \_\_\_\_\_ / 14      4. \_\_\_\_\_ / 12  
 2. \_\_\_\_\_ / 20      5. \_\_\_\_\_ / 24  
 3. \_\_\_\_\_ / 30

**Total Score:** \_\_\_\_\_ / 100

1. (14 pts) Each of the four carbonyl-containing compounds below is acidic, and would be deprotonated by a strong base like amide anion ( $\text{NH}_2^-$ ). Rank each molecule **1** through **4** in terms of its acidity, from most acidic (**1**) to least acidic (**4**). Then, for the two acids in the middle, draw the preferred conjugate base structure that would be generated by deprotonation with sodium amide ( $\text{NaNH}_2$ ).

CC(=O)C

CC(=O)N

CC(=O)N(C)C

CC(=O)N(C)C=O

*rank each acid 1-4:*

*conjugate base:*

$\downarrow$   
 $\downarrow$

*conjugate base:*

*NaNH<sub>2</sub> deprotonates these to:*

2. (20 pts) Each of the reactions on the following pages is drawn with two possible products. If one of the two products predominates, circle that preferred product. If the two products are produced equally, circle "BOTH". If neither product would result from the reaction, circle "NEITHER". **Circle one answer only.**

**BOTH**  
(equally)

**NEITHER**

**BOTH**  
(equally)

**NEITHER**

(D = deuterium,  
a heavy isotope of hydrogen,  
that acts just like hydrogen.)

**BOTH**  
(equally)

**NEITHER**

**BOTH**  
(equally)

**NEITHER**

3. (30 pts) For each reaction shown below, draw a mechanism that explains how the product is generated from the starting material. In your answer, make sure that you:

- Draw each step of the mechanism separately;
- Use “electron pushing” to show where the electrons in each step go;
- Use only the molecules that you are given; do not invoke reactants or solvents that aren't in the problem.

*Mechanism:*

Mechanism:

4. (12 pts) In the box on the next page, propose a multistep synthesis of the product below, beginning with the starting material given. In addition to this organic starting material, you can use any reagents and reactions we've learned about in class. You might discover multiple answers to this problem; draw only your best (one) synthetic route. Feel free to draw an incomplete route—we will give you partial credit where we can.

5. (24 pts) For each of the reactions below, fill in the empty box corresponding to reactants, reagents, or products. Give only one answer in each box. For reactions that you expect to yield multiple products, draw one major product. For reactions that yield multiple enantiomers, draw only one enantiomer in the box, and include the note “+ enantiomer”.

*used in excess?*

**YES** or **NO** ?

*(circle one)*
