NAME _____

ID # _____

HONORS ELEMENTARY ORGANIC CHEMISTRY I (2331H)

9:05 – 9:55 am, November 13, 2013

Exam 3

If you want to pick this exam up on Friday in class (in public), please check the box on the right: ☐

If you do not check the box, I will not bring your exam to class on Friday, and you will need to pick up your exam in private from Chemistry department staff in 115 Smith beginning Monday, November 18th. Exams that are not picked up within two weeks will be disposed of.

A periodic table is attached to the back of this exam as an aid. Otherwise, you are not permitted to use any other materials (including notes, books, or electronic devices of any kind).

Right now, write your name and student ID number at the top of this page. When the exam begins, please write your name at the top of the next page.

You may use pen or pencil. However, re-grades will be considered only for exams completed in pen.

Please write your answers in the boxes/spaces provided. If your answer is not in the appropriate space (say, for example, it's on the back of the page), draw us an arrow and/or note telling us where to look.

NAME _____

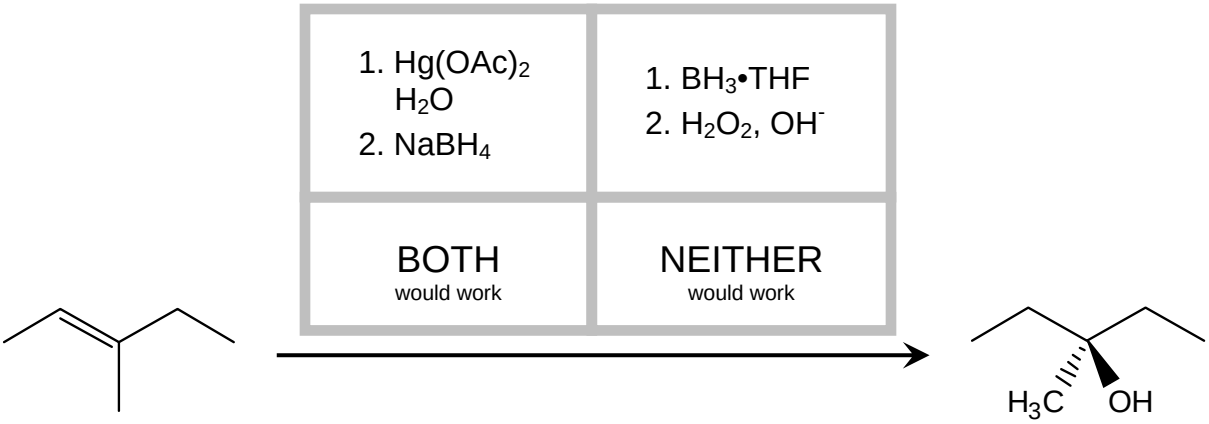
Scoring: 1. _____ / 8 4. _____ / 19

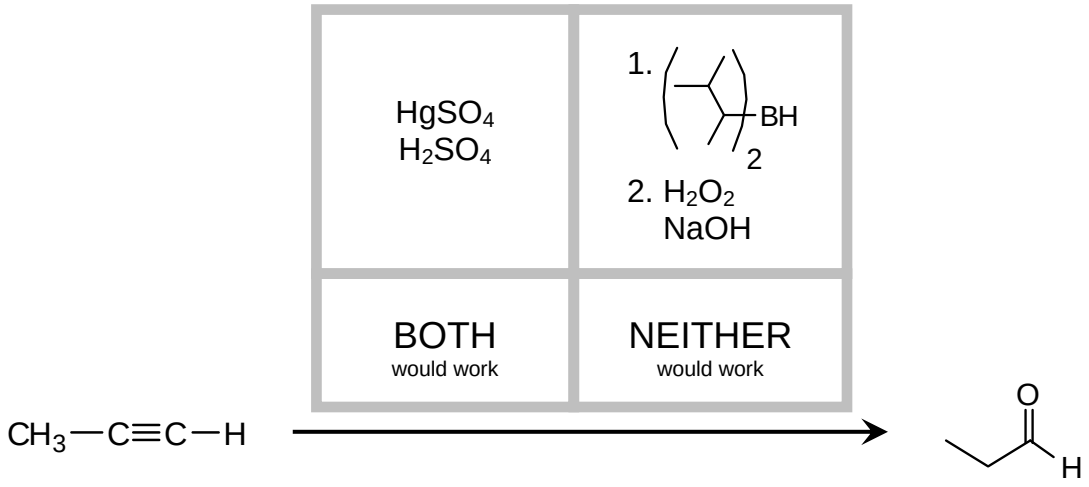
2. _____ / 16 5. _____ / 16

3. _____ / 15 6. _____ / 26

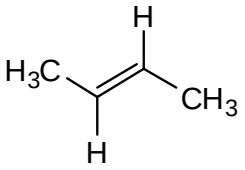
Total Score: _____ / 100

1. (8 pts) Each of the reactions below is drawn with two possible reaction conditions. If only one of the two reaction conditions would generate the given molecule as the major product, circle those conditions. If both sets of conditions would accomplish the reaction, circle "BOTH". If neither set of reaction conditions would succeed, circle "NEITHER". **Circle one answer only.**



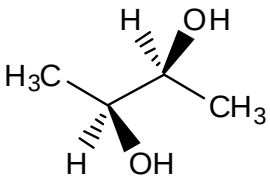


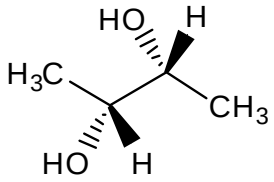
2. (16 pts) Each of the reactions below is drawn with two possible products. If one of the two products predominates, circle that preferred product. If the two products are produced equally, circle "BOTH". If neither product would result from the reaction, circle "NEITHER". **Circle one answer only.**



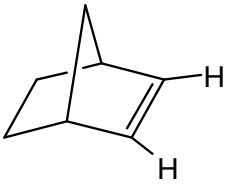
$KMnO_4$

$H_2O/^-OH$
cold, dilute

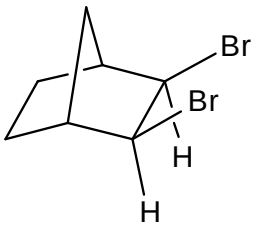


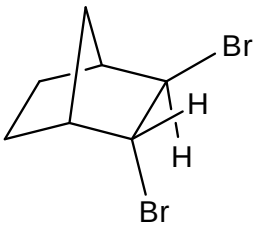


BOTH (equally) | NEITHER



Br_2

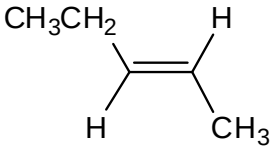




BOTH (equally) | NEITHER

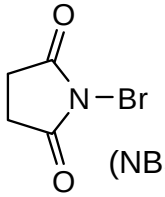
$CH_3CH_2-C\equiv C-CH_3$

Pt, $H_2(g)$



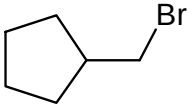
$CH_3CH_2CH_2CH_2CH_3$

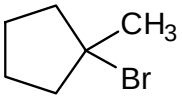
BOTH (equally) | NEITHER



(NBS)

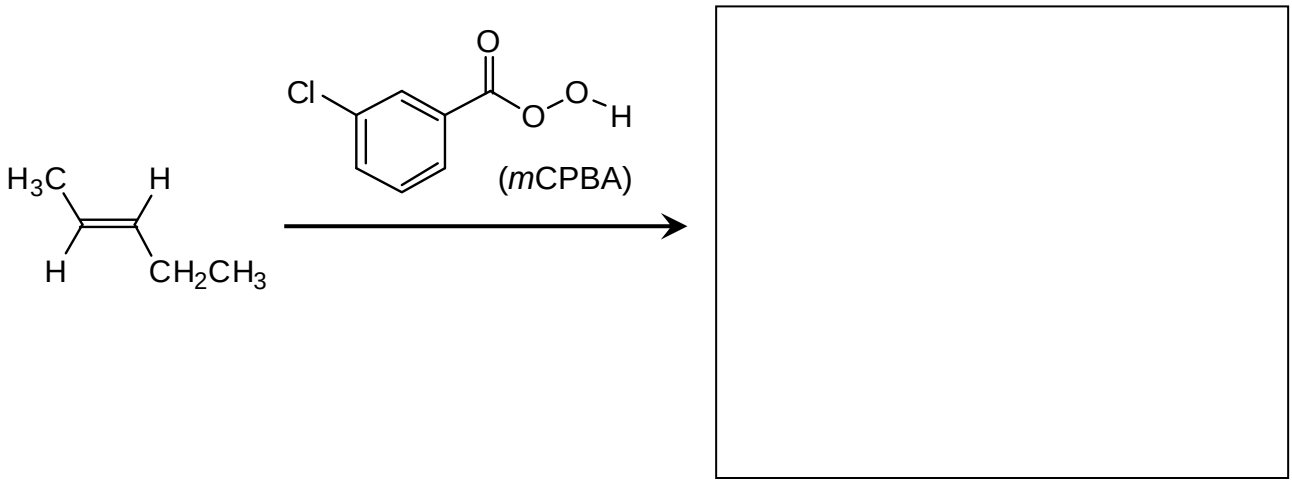
AIBN

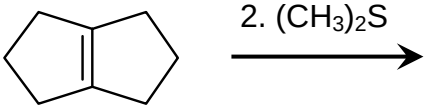


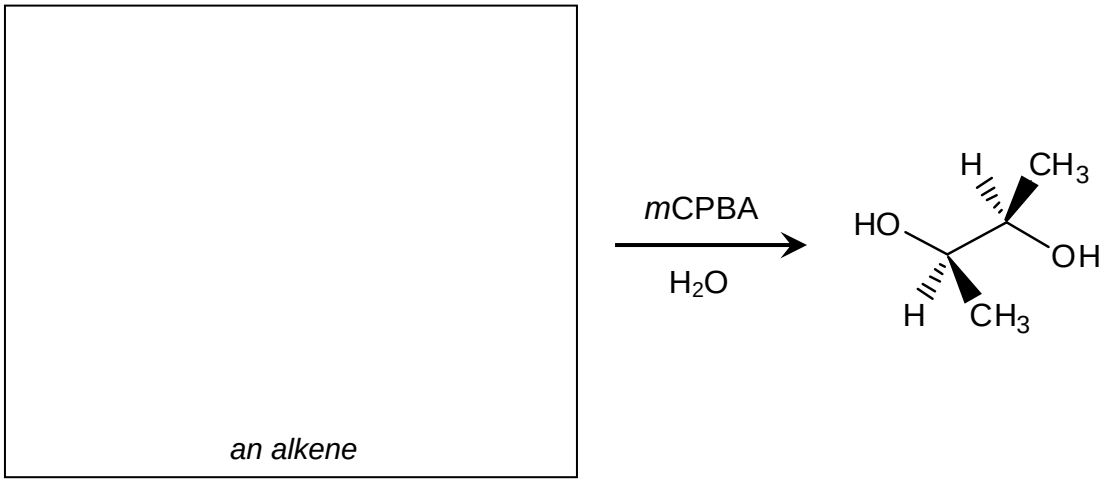


BOTH (equally) | NEITHER

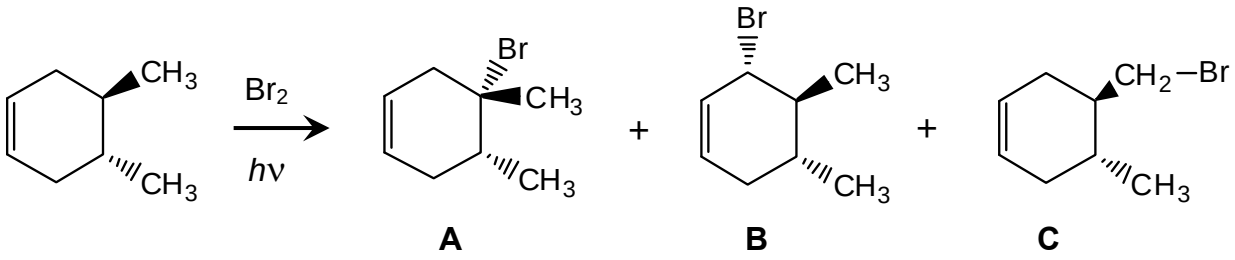
3. (15 pts) For each of the reactions below, **fill in the empty box corresponding to reactants or products**. For reactions that you expect to yield multiple products, give the major product. For reactions that yield multiple enantiomers, draw only one enantiomer in the box, and include the note "+ enantiomer".



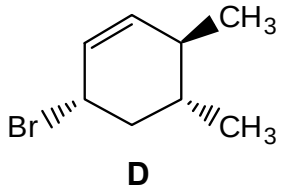




4. (19 pts) When the starting material below is exposed to the conditions of free-radical bromination, four monobrominated products (**A**-**D**) are isolated.



a) How would these four molecules relate in terms of product ratio? Which product would be most prevalent, and which would be least prevalent? In the boxes below, rank the four molecules (by letter) from highest to lowest product ratio. If any two molecules would be observed at equal ratios, circle the "≈" sign between those two boxes.



highest product ratio ☐ **>** *or* **≈** ☐ **>** *or* **≈** ☐ **>** *or* **≈** ☐ *lowest product ratio*

(circle one) *(circle one)* *(circle one)*

b) The free-radical chain reaction that generates products **A**-**D** is slowed by <u>termination</u> reactions that remove radicals from the reaction cycle. In the box on the right, draw one termination product that would be observed for the reaction above, *other than Br_2 and products* **A**-**D**. (So, do <u>not</u> draw Br_2 or any of the products **A**-**D** above as an answer to this part.)

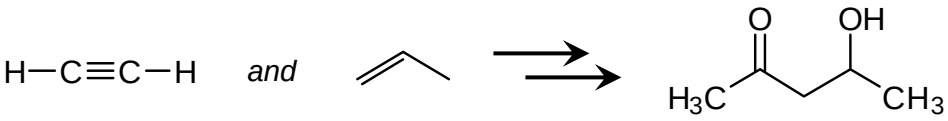
a termination product

(Problem 4 continues on the next page)

c) If the reaction on the previous page were a chlorination instead of a bromination—using Cl_2 instead of Br_2—would the amount (ratio) of product **B**(Cl) be more, less, or the same as the amount (ratio) of product **B**(Br) made in the bromination? (Circle one answer.)

Chlorination would generate **more** / **less** / *the* **same** *amount of*  **B**(Cl) *than bromination would generate of*  **B**(Br)

5. (16 pts) For the starting materials and product shown below, **propose a multistep synthesis**. In addition to the molecules shown, you can use any reagents and reactions we've learned about in class. You might discover multiple answers to this problem; draw only your best (one) synthetic route. Feel free to draw an incomplete route—we will give you partial credit where we can.



6. (26 pts) On the next page, **draw a mechanism** (using "electron pushing") for each of the reactions shown. Draw each mechanistic step explicitly; don't cheat by combining multiple processes in a single step. Use only the molecules shown in the problem; don't invoke generic species. (E.g., don't use "H-A" as a generic acid.)

Key

11 — Atomic number
Na — Element symbol
Sodium — Element name
22.99 — Average atomic mass*

* If this number is in parentheses, then it refers to the atomic mass of the most stable isotope.
