The Electrospray Kool-Aid Litmus Test: New Capabilities and Research in the Department of Chemistry Mass Spectrometry Facility

In the past year, new instrumentation and capabilities have been implemented in the Department of Chemistry Mass Spectrometry Facility and Waters Center of Innovation for Mass Spectrometry. This talk will focus on a review of the overall capabilities of the facility, highlight newly acquired instrumentation, and discuss a model toward nurturing research projects that employ these new instruments. Initial progress in method development for several research projects will be discussed.

Host: Christy Haynes
